

VitrA

Better hygiene.
For a better quality of life.

VitrA shower toilets and WCs with bidet function

VitrA

We invest in rooms that are essential
for people: bathrooms

The complete bathroom

VitrA focuses on the physical and emotional needs of people and invests in design to shape all essential elements of the bathroom.

Inspiration is everything

It all starts with open questions around design in order to better understand needs, wishes and decisions. To fulfil these needs and wishes, VitrA subsequently creates an extraordinary array of special and unique combinations.

Powerful perfection

Seven state-of-the-art factories produce sophisticated products and adhere to extremely high standards while gradually reducing VitrA's ecological footprint.

Collaboration with designers

VitrA collaborates with recognised industrial designers from around the globe. Working together with these top talents doesn't just increase product functionality, but also leads to new and innovative product collections.

VitrA is global

Customers worldwide are welcomed at over 2,000 points of sale in more than 75 countries – including 150 exclusive VitrA showrooms in Istanbul, London, Cologne, Moscow, Dubai, Mumbai, Delhi and other major cities.

Technologies for the future

The VitrA Innovation Centre and its strong team of engineers are bathroom sector leaders when it comes to new and innovative solutions and technologies. It is also the brand's headquarters for R&D activities.

Improved personal hygiene

VitrA's continued health research leads to new technologies for improved hygiene in the bathroom. These solutions elevate personal hygiene to a new level.

A promise to the future

VitrA follows the Blue Life guidelines, which were developed to reduce our impact on the environment. They are our philosophical foundation in Production, Design and Management.

“Who says
that hygiene
can’t be
fun?”

Water. Cleaning. Solutions.

A new level of comfort

Decades of experience have shown that that integrating design and functionality are essential for the holistic design of a bathroom. All VitrA collections – from ceramics and bathroom furniture to taps, tubs and tiles – are based on this fundamental idea. Inspired by the Turkish roots of our brand, the products are based on the sociable, passionate and diverse culture. VitrA products transform daily hygiene into an enjoyable ritual.

The future is water

Around two-thirds of all people already use water for gentle cleaning after using the toilet. This is both hygienic and comfortable. Using water-based cleaning is not only part of the new generation’s lifestyle, but it also offers a variety of advantages for older and less physically able people. The water cleaning solutions from VitrA combine hygiene, well-being and design in a diverse range of shower toilets and WCs with bidet function to create a new level of personal comfort in the bathroom.

The team at VitrA hope you find inspiration with this approach to personal hygiene whilst you explore our products. If you have any questions, we would love to answer them in person at our VitrA showroom in London or via email: info@vitra.co.uk

The smart shower toilet for “Generation clean”.

The unusual becomes the indispensable

Humans have nearly always used water to care for our body, as it leaves us feeling fresh and clean. Therefore, it is not surprising that two thirds of humans use water not just for showering and washing their hands, but also for cleaning intimate parts of their bodies.

Water cleanses, gently and effectively, the most sensitive parts of the body. This is why many cultures forgo toilet paper and rely exclusively on water after visiting the toilet.

Everyone, irrespective of their age or gender, uses the toilet several times a day. This makes it even more important to talk about this completely natural routine instead of treating it as a taboo. The bathroom is a place for cleanliness, but also a place of retreat, relaxation and health. Based on this, the multifunctional shower toilets and WCs with bidet function from Vitra combine the pleasant cleanliness of water with excellent comfort through outstanding technology.

The importance of hygiene combined with new technology

The meaning of hygiene and its importance for physical well-being have been common knowledge for a long time. However, the transition from a conventional WC to a shower toilet seems unusual to many people. This is completely understandable, as especially in Europe, most people are used to reaching for toilet paper.

But change offers an opportunity for improvement: Effective and gentle cleaning with water, carefully protecting the skin and additional comfort through using the latest technology will turn your daily visit to the WC into a moment of relaxation. Experience the wide range of functions for an extraordinary feeling of cleanliness that matches your personal needs.

V-Care Prime shower toilet

The advantages at a glance.

Hygiene

Water is the most natural and effective basis of any cleaning ritual. Why should this be any different for a visit to the WC?

Care

Water gently protects the most sensitive parts of our body. It leaves our skin with with an incomparable feeling of freshness.

Comfort

With a range of functions such as the adjustable water jet, configurable dryer and much more, Vitra shower toilets create a unique atmosphere of harmony around hygiene and comfort.

Sustainability

Using water for personal hygiene reduces the use of toilet paper. This not only minimises the clogging of drains, but also protects the environment.

Ambience

All Vitra shower toilets combine the functions of conventional WCs with those of a bidet and surpass them when it comes to their comfort and design. They allow for a space-saving and aesthetic solutions.

Vitra Rim-ex

The rimless technology ensures the toilet is fully cleaned after every use.

Are you impressed by the shower toilet?

“My scepticism disappeared a long time ago!”

Claudia loves hers. Two years ago she renovated her bathroom and decided in favour of our V-Care Comfort shower toilet. We visited her at home near York and wanted to find out what convinced her to move to a WC with bidet function. Hello Claudia!

VitrA: What inspired you to install a shower toilet?

Claudia: Actually, at the beginning of the renovation it never occurred to me that there are alternatives to simply installing a normal toilet. In the end, our plumber recommended that I find out more and referred me to the VitrA website – but at that time, I was still quite sceptical about shower toilets.

VitrA: What was the deciding factor in your purchase of a VitrA shower toilet?

Claudia: I learnt more about how shower toilets work when I visited a local showroom that had a selection of shower toilets – and was even able to try one out right there (laughs). It was honestly a long process until I finally decided on the shower toilet and the heated seat.

VitrA: And what has happened to your initial scepticism?

Claudia: Both for my husband and me, using the shower toilet is now part of our everyday routine! My scepticism disappeared a long time ago: I am definitely not surprised that using water exclusively for cleaning after having used the toilet is common practice in many countries.

VitrA: Yes – and in the UK as well, the trend is slowly but surely going in that direction. How do your guests react to the shower toilet?

Claudia: Most of them are curious. Occasionally, visitors use the shower toilet like a normal WC. Friends that are visiting more frequently have certainly tested out all functions. At the beginning, it's a special attraction for everyone, but at some point it becomes part of everyday life. It requires a little bit of time to get used to.

VitrA: What would you tell friends and relatives who are uncertain about switching to a shower toilet?

Claudia: Try it out, do your research and don't be put off by the the presumed adjustment and preconceived ideas or embarrassment. It is worth it.

V-Care Comfort

Experience moments of relaxation and prioritise your health.

Health is different for each of us

Luckily, in our society we no longer differentiate between “sick” and “healthy” – health means much more than just a functioning body.

How can we strengthen our well-being and improve our health? One thing is for sure, every person perceives the concept of well-being differently. However, there are a few basic factors that make life a little less difficult. These include healthy nutrition, enough rest, exercise and an individual personal comfort zone. The personal environment also plays a big part, untidiness and dirt often create stress and are a breeding ground for germs and bacteria.

Cleaning with water – pleasant and fresh

We naturally use water to wash our hands. According to Dr Manfred Sacher, a specialist for skin and associated diseases in Cologne, Germany, this is not surprising, as cleaning with water is more thorough than with dry paper. From a health perspective, water-based cleaning has many advantages beyond showering and washing hands, such as after using the WC. “Water is superior for daily intimate hygiene care. Not only on special days of the month, or an increased need for cleanliness in old age, but in general. The gentle care is beneficial to our body, it cleans effectively and prevents skin irritation,” said Dr Sacher.

Bathrooms - The feel-good place

Each of us visits the WC around eight times a day. The extent of how good we feel has a direct impact on our health. The combination of hygiene, comfort and aesthetics in the bathroom create an atmosphere in which we are able to relax more easily. This not only affects our body, but it also influences our spiritual well-being. This makes it even more important to create a space in which time passes quickly and you feel completely at ease.

“It simply feels
right to me!”

A “perfect match”
for every bathroom.

V-Care Prime

V-Care Comfort

V-Care Essential

VitrA shower toilet basic functionality.

Easy to use thanks to clever technology

All VitrA shower toilets are characterised by intelligent product design and technological precision. Personal hygiene is more fun through the effortless integration into everyday life and the basic functions that the entire V-Care series offers.

For adults and children

The shower toilet and its functions are even suitable for little guests. The remote control is designed to be intuitive and easy to use by all ages. All functions and settings are both child compatible and safe.

Easy to descale

The descaling function effectively protects the system against limescale build up and as a result the shower toilets are suitable for different water hardness levels.

Concealed electronics

The well thought through aesthetics of V-Care shower toilets ensure that all electronics and water fittings are concealed. The concealed installations leaves no room for dust or dirt to gather.

Energy-saving mode

When the toilet is not in use the preprogrammed energy-saving mode automatically reduces power consumption.

All functions can also be switched off so you can simply use your shower toilet as a conventional WC.

V-Care Prime

Technological revolution meets design icon.

With its diverse functions, intelligent technology and unmistakable design, the V-Care Prime stands for much more than a sense of hygiene.

Besides its individual setting options for an unmistakably sense of cleanliness, the shower toilet also features a timelessly elegant design. In collaboration with the internationally renowned designer Arik Levy, the shower toilet was created with clear forms and simple, curved lines. It is both an exclusive shower toilet and an aesthetically pleasing design object. The V-Care Prime from Vitra opens up a new, modern world of water-based cleaning.

V-Care Prime

More luxury in everyday life ...

Allow yourself to be pampered

With the V-Care Prime being a multifunctional shower toilet, it adds maximum comfort to your everyday life. You can adjust each setting to suit your personal needs - from the nozzle function, water pressure setting, seat and dryer temperature control. The automatic air extraction, an integrated nightlight and contactless handling via remote control, makes the V-Care Prime a premium shower toilet.

...with state-of-the-art technology.

Everything at a glance

You can easily and intuitively select your desired settings by using the remote control or your smartphone in advance. The shower toilet app provides an overview of your profile, your default settings and usage data. Thanks to encrypted internet access integrated within the toilet, the V-Care Prime can also be controlled when on the go. The internet connection also ensures it is always running on the latest version of software.

Back-to-wall or wall-mounted options

You will find detailed information on pages 72-73.

Brightens up every moment

The nightlight activates automatically as soon as the surrounding brightness falls below a predetermined threshold.

Arik Levy.

Interiors meet art.

Designer, artist, technician, photographer, videographer: His different skills are reflected in his best known works. The cooperation between Arik Levy and the Vitra design team created the successful Voyage bathroom collection and now an exclusive shower toilet. The V-Care Prime shower toilet combines design and technology, creating harmony between aesthetics and function. But what inspires his enthusiasm for interior design? We spoke with Arik Levy about his inspiration, the uniqueness of bathrooms and the philosophy behind his designs.

Vitra: Which part of the house do you consider to be the most personal?

Arik Levy: The most important room in the house is always the one I'm currently in. The importance of the rooms shifts with my activities. It is not architecture that brings places alive, but it is the people that give importance to rooms. When I'm in the kitchen, the kitchen is automatically very important to me. This logic applies to all other rooms, but particularly also to the bathroom.

Vitra: Why would you highlight the bathroom?

Arik Levy: Bathrooms have an aspect that other rooms do not have. They are a place where I am primarily alone with myself. A place where I accept myself. In the bathroom, I probably have the most intimate relationship between myself and my body.

“People should feel their furnishing and not only see it.”

Vitra: How would you describe today's bathrooms and bathroom rituals?

Arik Levy: When you return home after a hectic day, a meeting or similar, there is a place that is waiting for you. You know that when you close the door, you are in a room that you have created. The beauty of the bathroom is that you are able to determine how long you will stay and that there is no pressure from the outside.

“Bathrooms are a system defined by your own lifestyle and not by the opinions of others!”

V-Care Comfort

Award-winning technology for well-being.

The V-Care Comfort combines modern hygiene standards with contemporary awareness of style. The name speaks for itself: The focus is not just on the water-based cleaning, but also the additional comfort. Individual needs of the users are in the spotlight of the technical engineering advances. The diverse settings guarantee a special feeling of cleanliness. Thanks to its superior quality, pleasing aesthetic and perfect design, the V-Care series enriches every bathroom design.

V-Care Comfort

Simply

reVitrAlising.

For your well-being

The V-Care Comfort portrays the combination of cleanliness and comfort at a unique level. Alongside water-based cleaning, the adjustable seat temperatures and integrated air extraction are not the only features that ensure moments of relaxation. The integrated dryer completes the cleaning experience - entirely without toilet paper and with a pleasant temperature.

Your choice for more freshness

In addition to the adjustable nozzle position and water pressure, the water nozzle of the V-Care Comfort can also be adjusted to your body's needs. The nozzle moves forwards and backwards (oscillation), the water pressure automatically decreases and increases (pulsation), but also the combination of both is particularly pleasant and extraordinarily effective.

Before and after each wash, the stainless steel nozzle automatically cleans itself.

Technologically advanced

Use the V-Care Comfort completely contactless – with the remote control and integrated sensor, the lid automatically opens and closes.

You will find detailed information on pages 74-75.

V-Care Essential

The beginning of a new hygiene culture.

The classic model among the Vitra shower toilets is the foundation for a special hygiene experience. Equipped for rear washing and intimate hygiene care, the V-Care Essential optimises the feeling of cleanliness after a visit to the WC. With its stylish, simple design, the NOA architecture firm designed a toilet shower that harmoniously integrates itself into any bathroom interior. Improved health, more fun, lower energy consumption - improved hygiene!

V-Care Essential

Cleanliness begins with the V-Care Essential.

One nozzle – many benefits

The retractable nozzle is the focus of water-based cleaning. With its multifunctional settings, it is suitable for both rear wash and intimate hygiene care. The stainless steel nozzle automatically cleans itself before and after each use, thus preventing the accumulation of bacteria - and promising an all around perfect cleanliness.

The right care for your body

For optimal hygiene, both the nozzle position and water pressure are adjustable in line with personal sensitivity and individual needs. Using the remote control, you can choose among five different configurations to find the one right for you. This also applies to the water and heated seat temperature.

You will find detailed information on pages 74–75.

Built-in fresh air

Unpleasant odours are a thing of the past. The air extraction system, integrated into the shower toilet, uses a carbon filter to eliminate odours before they are able to spread to the surroundings.

“I can no longer imagine my bathroom without a shower toilet.”

Aquacare WC's

The intelligent combination of WC and bidet.

WCs with an integrated bidet function enable gentle, yet thorough cleaning with water. Along with the standard antibacterial Vitra Hygiene coating, our Sento, Integra and M-Line collections offer a new experience of hygienic well-being.

The products do not have an electrical connection, but solely function through technology that guarantees drinking water safety standards in accordance with DIN EN 1717 and additionally offer DVGW approval.

VitrA Aquacare

Dr Mete Demiriz has been a university professor at Westphalian University of Applied Sciences in Gelsenkirchen, Germany for 25 years and has specialised in sanitary and bathroom technology. With his creative ideas, innovations and research in this field, he now works as an international consultant. Drawing on his wealth of experience, he designed the Aquacare WC models together with VitrA.

VitrA: In your opinion, what is special about the VitrA Aquacare WCs with bidet function?

Dr Mete Demiriz: We had the vision of developing innovative, high-quality and affordable bidets. The resulting Aquacare series is deliberately kept simple to fit into everyday life, but still features full functionality. Nevertheless, when it comes to technology and design, the Aquacare Sento, M-Line and Integra models stand out from conventional WCs. The aim was to create an extraordinary feeling of hygiene and cleanliness and in that we have succeeded!

Aquacare WC series: Sento

Aquacare WC series: M-Line

Aquacare WC series: Integra

Intuitive operation

Simply use the single-lever mixer on the wall or the WC to easily and intuitively control the water feeder for Aquacare WC sets. Depending on how far the handle is raised, the water jet works at different levels of strength. With the integrated single-lever mixer or the integrated thermostat single-lever mixer, you can control the water temperature according to your personal preferences.

Integrated thermostatic/single-lever mixer

The integrated thermostatic single-lever mixer is operated the same way as the single-lever mixer described above.

The difference is that it features an integrated thermostatic cartridge, which is permanently set to a maximum of 38°C to prevent scalding from water that is too hot.

Simple use and intuitive operation:

The advantages at a glance.

- Simple installation
- No electrical connections necessary
- Cleaning with water
- Self-cleaning nozzle
- Vitra Hygiene

VitrA

Aquacare

Sento

Harmonious bathroom concept in Scandinavian style

The Sento Aquacare features an oval and slim design. The curved lines and the slender soft-close lid, perfectly match the style of the Sento bathroom collection.

Natural wood tones marry harmoniously with Matt Anthracite, White, Light Grey or Fjord Green.

Wide range of products, uniform look

Modern yet timeless, and simple but distinctive, the wide range of ceramics and furniture in the Sento bathroom collection create a harmonious overall look.

Sento furniture carcass in matt fjord green

WC
(The integrated single-lever mixer is not included)

WC with integrated thermostatic single-lever mixer

You will find detailed information on pages 76-78.

VitrA

Aquacare

M-Line

In tune with the times

Chiseled beauty: Developed by the renowned NOA design office, the M-Line series skilfully balances functionality and aesthetics. The vibrant form follows

the urban city trends and transforms the bathroom into a place of rest and relaxation.

Urban attitude towards life

Dynamic room design, luminous colours and stylish ceramics: In this bathroom, urban esprit is combined with a casual atmosphere. The modern design reconciles exceptionally high quality and youthfulness in a distinctive look. The eye-catcher in the room: the Aquacare M-Line.

You will find detailed information on pages 76-78.

Aquacare M-Line available in two versions

WC
(The integrated single-lever mixer is not included)

WC with integrated thermostatic single-lever mixer (on right hand side)

VitrA

Aquacare

Integra

Classic design with functional standards

Comfortable, clear-cut and classic design: The Aquacare WC model Integra is, just like the Integra bathroom collection, elegant and simple. This allows you to personalise your bathroom to your individual taste, depending on size and style of the room.

The exceptional functionality, sophisticated design details and smart solutions offered by the collection, support the modern functioning of the bathroom. Wall-hung or back-to-wall options available.

You will find
detailed information
on pages 76-77.

Lightness meets naturalness

The straight lines of the Vitra Integra allows for creativity in the room, but still remains a stand-alone design element. In combination with coloured walls, modern decor and

plants, it transforms the bathroom into a place of relaxation.

The high-tech solution for water protection.

Integrated design

Besides the water supply, no additional devices or installation is necessary.

Maintenance and cleaning

For maintenance, the lid can simply be removed with a single click. This provides fast and easy access to the mechanism underneath.

Maintenance and cleaning

The flush distributor is easy to remove and clean.

Sustainability starts with everyday life.

Water, the elixir of life

Almost 70% of the earth is covered with water, but less than 1% of that water is suitable for keeping us alive and provided for. The health and well-being of individuals, as well as that of society in general, depends on fresh, clean water. It is the core of the sustainable development of a healthy ecosystem and the future of life on Earth.

Protection of drinking water against contamination

With this knowledge, Vitra is committed to the preservation and protection of a clean water supply. Based on European standards, the shower toilets and WCs with bidet function prevent drinking water contamination in accordance with DIN EN 1717. The patented Vitra technology prevents the backflow of contaminated water, protecting the fresh water system.

Beneficial care leaves skin feeling soft.

Hygiene in accordance with modern standards

In the UK, most households use toilet paper. However, the habit of using toilet paper compared to hygiene cultures of other countries, is perplexing. After all, why are we relying on water to clean our body, except when it comes to the intimate parts of our body?

Water-based cleaning has a strong hygienic advantage over toilet paper. It removes residue and bacteria in the most natural way. Unlike dry paper, water takes care of the skin in the most gentle and soothing way, preventing cracked skin and itching.

Wet wipes: environmental polluters

Initially it seems obvious to use wet wipes as an alternative to traditional toilet paper. But the preservatives and perfumes they contain, may cause skin irritations and contact allergies. Water without soap, additives or perfumes is completely sufficient for gently cleaning those intimate parts. Additionally, wet wipes are a burden to water treatment plants and the environment: The antibacterial ingredients they contain inhibit the breakdown of the wipes. As a result, wet wipes may not fully decompose and clog the sewerage systems.

Meanwhile, water-based intimate hygiene care has become more common in Europe as well. This is not only due to technological advances and increased comfort, but also the growing understanding that the pleasant feeling of water based cleaning sets a higher standard of quality of life.

Vitrus standing cistern

An all-around perfect look.

The Vitrus standing cistern does not only simplify your WC installation, but also makes a visual statement with its white or black glass front - for an exceptional glamorous WC area.

The eye-catcher in any bathroom.

Visibly beautiful

The Vitrus standing cistern is the ideal addition to any WC model. It is a perfect retro fit if you want to install a wall-hung WC. The glass front, available in white or black, gives your WC area a high-quality and completed presentation. The brushed aluminium side panels round off the overall look.

The two-piece front panel made from safety glass, allows for easy maintenance access to the top section of the cistern. The simple and elegant flush panel is already integrated into the Vitrus standing cistern.

Vitrus standing cistern for conventional back-to-wall WCs

Vitrus standing cistern for back-to-wall WCs with bidet function (incl. water nozzle control)

Suitable for your back-to-wall WC with bidet function and the Vitrus standing cistern. The single-lever mixer to regulate the water can be found on the side panel.

Simple to use with the help of clever technology

The cistern integrated into the frame has three and six litre water volume for two different flush volumes. In line with the Vitra design principle, the water connection is concealed. The Vitrus standing cistern functions without electricity and is suitable for both stud and solid walls.

Your delivery will include installation material, a 90 degree water drain and a 110mm adapter.

You will find detailed information on pages 78-80.

VitrA Hygiene glaze.

...for a perceptible feeling of hygiene

The VitrA Hygiene glaze was developed in-house by VitrA as an antibacterial layer for surfaces. It effectively reduces germ growth in moist environments and is therefore ideal for all sanitary ceramics in the bathroom.

No place for contamination

All ceramic VitrA products are coated with VitrA Hygiene - both inside and out. The antibacterial coating makes it easier to clean the bathroom. The VitrA Hygiene coating also reduces the use of potentially harmful cleaning products and is therefore more environmentally friendly.

The VitrA Hygiene coating keeps its protective properties even after years of use and offers you and your environment great levels of cleanliness and hygiene.

From the very beginning, eliminates

99.9%

of all germs.

A comparison shows: The VitrA Hygiene glaze reduces the growth of bacteria

| Bacteria growth | Evenly soiled surfaces | After 12 hours | After 24 hours |
|--|---|---|---|
| Surface protected with the VitrA Hygiene glaze |  |  |  |
| Surface without VitrA Hygiene glaze |  |  |  |

VitrA Rim-ex.

No rim for more cleanliness

The rimless technology from VitrA is a key component of all shower toilets and bidets. The reason for this is obvious: Where there is no rim, there is no room for bacteria and germs to settle and spread. According to studies undertaken by Akdeniz-University, this makes VitrA Rim-ex WCs 99.9% more hygienic and easier to care for than conventional WCs.

Conventional rim

VitrA Rim-ex rimless technology

VitrA Flush

All shower WCs and Aquacare WCs are equipped with VitrA Flush 2.0 technology. The ceramic flushing distributor guides the water in three directions for full coverage, and prevents uncontrolled water spray. Irrespective of the cistern manufacturer and installation height, the water volume flushes the entire WC surface. If the flushing jet is too weak or too strong, you can easily adjust it with the flushing distributor at the back of the inside of the WC.
